Construction Manager for Great Belt Projects at Sund & Bælt

Would you like to be close to the on-site work as we renew the Great Belt Fixed Link?
As Construction Manager for bridge works, you will play a key role in the renewal of one of Denmark's most important infrastructure assets, working close to both the technical solutions and day-to-day construction activities.
In Great Belt Projects, you will contribute to projects including the West Bridge Bearing Refurbishment, where bearings on the West Bridge between Nyborg and Sprogø are being refurbished and replaced. The work is carried out while the Great Belt Fixed Link remains operational, requiring a strong focus on safety, quality and precise coordination.

The position
As Construction Manager, you will act as Sund & Bælt's day-to-day coordinating client representative on site. You will monitor the contractor's work and contribute to ensuring safe and controlled execution in accordance with the contract, approved methods and project requirements.
You will be part of the Great Belt Projects team and collaborate closely with project management, Contract Administration, Project Controls, Design & Engineering, HSE specialists, consultants, the contractor and Great Belt Operations.
Your primary base will be in Halsskov, with the option of working selected days from our office at Vester Søgade in Copenhagen. The role also requires your presence at relevant worksites and project locations.

Responsibilities
As Construction Manager, you will ensure effective coordination, documentation and timely follow-up on site activities. You will represent the client's interests with a strong focus on safety, quality and progress. You will be responsible for site supervision and carry out supervision activities yourself when required. Your key responsibilities will include:

- Managing day-to-day client-side construction assurance through the consultants' site supervision services, including monitoring the contractor's execution of the works, resourcing, plant and equipment, site access, logistics and progress.
- Monitoring the contractor's compliance with occupational health and safety, emergency preparedness, environmental and climate requirements, promoting an open and proactive safety culture, and coordinating fulfilment of the client's occupational health and safety obligations.
- Reviewing and following up on the contractor's method statements, risk assessments, quality documentation and inspection and test plans in collaboration with the project consultants, coordinating technical supervision and ensuring timely follow-up on site observations.
- Coordinating interfaces between bridge works, operations, site access, land-based logistics, other contracts and relevant marine activities, and facilitating the associated construction, safety, logistics and planning meetings.
- Maintaining accurate, factual site records and providing timely input on progress, variations, quantities, delays, risks, cost performance and potential contractual matters, escalating significant issues to project management. In cooperation with the Project Manager, monitoring day-to-day expenditure and cost variances for the bridge works, planning and chairing construction meetings, recording decisions, responsibilities and

deadlines, and following up on agreed actions.

Your background

You have a relevant technical background, for example as a civil engineer, structural engineer, construction technologist, architectural technologist or similar. Most importantly, you have documented experience in construction management, site management, technical supervision or supervision coordination from complex civil engineering, refurbishment or maintenance projects. We also expect that you:

Have experience with bridges, structures, operational infrastructure, areas open to traffic or other technically and safety-critical worksites.

- Have a solid understanding of contractor planning, method statements, risk assessments, quality and inspection plans, as well as documentation requirements.
- Have experience with occupational health and safety, emergency preparedness and the safe coordination of multiple parties.
- Are able to document site conditions accurately and systematically, providing a sound basis for progress monitoring, contract administration, risk management and decision-making.
- Communicate confidently in both Danish and English. Knowledge of AB18, Danish occupational health and safety regulations, construction contracts, technical standards and document management systems is an advantage.

You as a person

You are practical, clear in your communication and highly collaborative, with the ability to create structure, maintain focus and drive progress. You thrive in a complex environment with multiple simultaneous activities and stakeholders and have the judgement and confidence to act and escalate issues when necessary.

You take a solution-oriented approach and are skilled at fostering constructive dialogue, while maintaining a clear client role and respecting the contractor’s responsibility for its own planning, execution, safety, quality and documentation.

What do we offer?

At Sund & Bælt, you will become part of an international workplace where skilled colleagues work together towards shared goals. There is room for flexibility, new ideas and opportunities to develop both professionally and personally. You will have responsibility and the opportunity to make a difference through work that matters to society. We also offer:

- Health and dental insurance
- A salary package based on qualifications
- A pension scheme
- A staff canteen scheme

Interested?

We aim to be an inclusive workplace that embraces diversity.

We therefore encourage everyone to apply, regardless of gender, age, ethnicity, religion, sexual orientation or disability.

You can submit your CV until the application deadline of 8 December 2026 by following the link below.

As Sund & Bælt manages critical infrastructure, please note that security clearance is a condition of your employment. Further information will be provided later in the recruitment process.

If you have any further questions, please contact **Pedro da Silva Jørgensen** at **psj@sbf.dk**.
